Experience

Software Engineer May, 2025 – Present

ThreeSigmaTech *Newark, Delaware, United States*

- Contributed to The Teacher Fund, a nonprofit and open-sourced project dedicated to making public school teaching a more desirable career, by upgrading outdated dependencies, improving site performance, and enhancing SEO through proper metadata rendering.
- Designed and developed the WaterFlow mobile application, an IoT-based solution.
- Revamped and migrated Dumpster, a trivia and vocab mobile app, with the updated version currently undergoing App Store review.
- Currently developing Dritta, a social place-recommendation mobile app built with Expo and React Native, enabling users to discover places visited and recommended by people they trust.

Software Developer April, 2026 – September, 2026

Mysogi Ads *Lagos, Nigeria*

- Implemented export functionality for campaign analytics data, allowing users to download reports in CSV and PDF formats.
- Contributed to the development of an automated weekly digest feature that sends customers performance summaries and analytics insights for their campaigns.
- Worked on the WhatsApp Ads feature for customers to create and send ads to their targeted audience.

Software Developer July, 2023 – June, 2025

Mysogi Ads *Lagos, Nigeria*

- Designed and developed core app features, including radio ad creation, app download campaigns, influencer campaigns, and SMS marketing campaigns.
- Built and integrated onboarding workflows with RESTful APIs using Axios, utilized *Redux Toolkit* for scalable state management, implemented React Navigation for smooth user flow, and maintained code stability through Git-based version control and collaboration.
- Transitioned into a backend role, leading the integration of Instagram and Facebook Ads into company products by analyzing Meta's Marketing API documentation, implementing endpoints, and writing test scripts for validation and reliability.
- App Store: View App
- Google Play: View App

Mobile Developer December, 2024 – February, 2025

Airtel Nigeria *Lagos, Nigeria*

- Developed the Airtel Outlet Creation app using TypeScript, React Native, Expo, and Expo Router, ensuring seamless navigation and efficient type-checking for a high-performance user experience.
- Designed and implemented user interfaces and core functionality across essential screens, including Splash, Login, Home, Notifications, Status, Profile, Outlet Creation, and Planned Sites.
- Created custom components such as dynamic text inputs, drop-down modals, and progress bars for the Outlet Creation flow.
- Internal enterprise application (not publicly listed on app stores).

Mobile Developer June, 2024 – September, 2024

Ringo Telecommunications Limited *Lagos, Nigeria*

- Built and optimized screens for various product services including Airtime/Data purchase, Pay TV subscriptions, Betting, Education, Electricity bills, Wallet management, and Cheap Data services.
- Implemented secure biometric (fingerprint) authentication for seamless app access and developed a transaction history filtering feature with customizable date ranges, enhancing accessibility, and overall user experience.
- Google Play: View App

Education

Kibo School of Technology (affiliated with Woolf University) Valletta, Malta

Advanced Undergraduate Diploma in Computer Science *Oct. 2022 – June 2024*
